

ABSTRACT OF THE DISCLOSURE

The object of the present invention is to make the setting condition of menu items easily adjustable on the setting screen with regard to the predetermined object to be operated. According to the present invention, since the camera setting utility screen for the CCD camera is displayed on the liquid crystal display, any one of the plural number of menu items is selected from the camera setting utility screen displayed according to the rotation operation and the push operation of the jog dial, the setting condition with regard to the menu item selected is adjusted corresponding to the rotation operation and the push operation of the jog dial, and the CCD camera is to be set to the setting condition adjusted, the whole processing from the selection of menu item to the adjustment of setting condition can be conducted only by the rotation operation and the push operation of the jog dial.
